imitations of the original Hot Binst at many. None of them have the shoulder by air light and gna-tight construction throughout which Cole's Hot Binst ass by reason of its numerous patents. A patiented steel colar connects the elbow draft to the stove body and cannot open by action of the fercest heat. The patented compound binge on the lower draft cannot warp, and the ash door closes artight by he own weight. The patented susoke proof feed door prevents sincke four or gas excaping when fuel is put in the stove. Perfect results, therefore from soft coal. The heavy fire box protects the points where other sloves bur out first, and insures great durability. Remember imitations lack the special features because these are fully natented and projected. All imitations soon open up scams and cracks which mak them fuel eators rather than fuel saverages.
